Level 3 → Level 4: Finding Hidden Files

Objective: Locate a hidden file in the inhere directory.

Commands used:

cd inhere
ls -la
cat <hidden-filename>

Procedure:

1. Logged in using the bandit3 account.
2. Changed to the inhere directory.
3. Used ls -la to display all files, including hidden entries.
4. Identified the hidden file and displayed its contents.
5. Recorded the password for the next level.

Result: Located the hidden file and obtained the next password.

Concept learned: In Linux, filenames beginning with a period (.) are treated as hidden by convention. The -a option of ls displays hidden entries, while -l provides detailed information.
